Sociological Abstracts Aug 16 2022 Contains more that 300,000 records covering sociology, social work, and other social sciences. Covers 1963 to the present. Updated six times per year.

H.L. Mencken Sep 24 2020 Baltimore native Henry Louis Mencken (1880-1956) was an essayist, literary critic, magazine editor, novelist, and journalist. Starting as a reporter for the Baltimore Morning Herald at the turn of the century, Mencken eventually became associated with the Baltimore Sun and his work for the newspaper spanned five decades. In *H.L. Mencken: An Annotated Bibliography*, S.T. Joshi provides the most exhaustive and comprehensive bibliography of the writings of H. L. Mencken ever assembled. It presents detailed information on his book publications from 1903 to the present, with a full list of editions and reprints. Most significantly, it presents for the first time a comprehensive annotated listing of his magazine and newspaper work (including more than 1,500 anonymous editorials for the Baltimore Sun, Baltimore Evening Sun, and other papers, which have never been listed in any previous bibliographies), a thorough index to his book reviews, and a full list of interviews Mencken gave during his lifetime. Word counts of nearly every item in the bibliography have been supplied, and the book has been thoroughly indexed by name, title, and periodical. Because every item has been annotated, scholars and students can, for the first time, gain an idea of the subject-matter of all Mencken's writings, especially his magazine and newspaper work. The indexes will allow users to locate any given item with ease. The chronological arrangement of each section allows users to

understand the growth and development of Mencken's work, making this volume an invaluable resource.

Stroke Genetics Jan 17 2020 Stroke is a major cause of death and the major cause of adult neurological disability in most of the world. Despite its importance on a population basis, research into the genetics of stroke has lagged behind that of many other disorders. However, the situation is now changing. An increasing number of single gene disorders causing stroke are being described, and there is growing evidence that polygenic factors are important in the risk of apparently "sporadic" stroke. Stroke Genetics provides an up-to-date review of the area, suitable for clinicians treating stroke patients, and both clinical and non-clinical researchers in the field of cerebrovascular disease. The full range of monogenic stroke disorders causing cerebrovascular

disease, including ischaemic stroke, intracerebral haemorrhage, aneurysms and arteriovenous malformations, are covered. For each, clinical features, diagnosis, and genetics are described. Increasing evidence suggest that genetic factors are also important for the much more common multifactorial stroke; this evidence is reviewed along with the results of genetic studies in this area. Optimal and novel strategies for investigating multifactorial stroke, including the use of intermediate phenotypes such as intima-media thickness and MRI detected small vessel disease are reviewed. The book concludes by describing a practical approach to investigating patients with stroke for underlying genetic disorders. Also included is a list of useful websites.
