Centers for Disease Control and Prevention Feb 21 2023 For over 60 years, the Centers for Disease Control and Prevention has worked tirelessly to address infectious diseases and other health hazards. Through the vision of Dr. Joseph W. Mountin, the Communicable Disease Center was created in 1946 as the successor to Malaria Control in War Areas (MCWA), a division of the Public Health Service based in Atlanta. The new agency, CDC, was charged with monitoring and controlling malaria, typhus, and other infectious diseases nationwide. Successful in addressing a wide array of health emergencies—including polio, measles, influenza, Legionnaires' disease, toxic shock syndrome, and the Ebola virus—one of the CDC's crowning achievements was its role in the global eradication of smallpox. Known today as the Centers for Disease Control and Prevention, it is recognized as the nation's premier health promotion, prevention, and preparedness agency and a global leader in public health. Discover how a bad batch of polio vaccine brought a nationwide immunization campaign to a standstill, how the mysterious Legionnaires' disease sparked nationwide panic and how, today, CDC scientists are at the forefront of prevention research.

Presidential Power and Management Techniques Aug 15 2022 An evaluation of presidential efforts to achieve greater control over policy implementation by intransigent federal bureaucracies. Benze [asserts] that Ronald Reagan's use of budget cuts and appointment of conservative

ideologues tended to enhance presidential power more readily than attempts at bureaucratic reorganization. Based on mail surveys of more than 350 domestic administrators, the author concludes that bureaucratic acceptance of management techniques requires the kind of persuasive political skills Reagan displayed in his first term, but were lacking in the Carter Administration. He cautions that Reagan's managerial initiatives engendered morale problems, and may lack institutional permanency in the absence of constitutional and statutory changes. . . . A useful addition to upper-division and graduate collections. Choice Professor Benze's new study looks at the historical trend toward centralization of policy implementation in the president's office and shows how--and with what degree of success--the Reagan and Carter administrations have met this problem. Among the important features of the book are the wealth of empirical data provided on the presidency and the analysis of both change and continuity between administrations in the handling of specific management areas.

Games Advisors Play Jul 22 2020 What happens when presidential advisors, in Machiavellian terms, think more of themselves than of the prince and seek their own profit more than the goals of the president or the "good of the realm"? In *Games Advisors Play*, Jean A. Garrison examines case studies of foreign policy in the Nixon and Carter administrations and addresses how and why advisors manipulate the group process, under what conditions advisors engage in power games, and in what situations they are most effective in influencing presidential policy choices. Given the high stakes, policy advocates employ various tactics to manipulate the advisory process and decision outcome. Three types of tactics are used: structural maneuvers, procedural maneuvers, and interpersonal maneuvers. Although these tools are important to the success of an advisor, the advisory process is a dynamic group process, and advisors must recognize that others have potential influence as well. The effectiveness of advisors therefore also depends on their power and

authority, their manipulative skills, their interpersonal communication skills, and the relationships among members of the inner circle. Using the internal policy debate over arms control to trace the influence advisors have on specific decisions, Garrison compares the power games in Nixon's hierarchical system Number Three: Joseph V. Hughes, Jr., and Holly O. Hughes Series in the Presidency and Leadership Studies to Carter's more open advisory system. The disparate advisory systems provided advisors with different opportunities to influence the president and overall policy making. As a contribution to the decision-making literature in foreign policy, Games Advisers Play challenges static conceptions of the advisory process. Foreign-policy scholars, presidential scholars, and political psychologists will find this an exciting and thought-provoking study.

Enemy in the Blood Nov 06 2021 Enemy in the Blood: Malaria, Environment, and Development in Argentina examines the dramatic yet mostly forgotten history of malaria control in northwest Argentina. Carter traces the evolution of malaria science and policy in Argentina from the disease's emergence as a social problem in the 1890s to its effective eradication by 1950. Malaria-control proponents saw the campaign as part of a larger project of constructing a modern identity for Argentina. Insofar as development meant building a more productive, rational, and hygienic society, the perceptions of a culturally backwards and disease-ridden interior prevented Argentina from joining the ranks of "modern" nations. The path to eradication, however, was not easy due to complicated public health politics, inappropriate application of foreign malaria control strategies, and a habitual misreading of the distinctive ecology of malaria in the northwest, especially the unique characteristics of the local mosquito vector. Homegrown scientific expertise, a populist public health agenda, and an infusion of new technologies eventually brought a rapid end to malaria's scourge, if not the cure for regional underdevelopment. Enemy in the Blood sheds light on the often

neglected history of northwest Argentina's interior, adds to critical perspectives on the history of development and public health in modern Latin America, and demonstrates the merits of integrative social-environmental research.

Summary of The Premonition Jul 14 2022 Summary of The Premonition - A Pandemic Story - A Comprehensive Summary The Premonition by Michael Lewis is the latest book from the author and its center on the United States' response to the Covid-19 pandemic. It also touches on history by looking back at how the late response from Philadelphia during the 1918 pandemic led to massive casualties compared to the quick response from St. Louis. The carnage described in the book by John Barry which President Bush read made him direct the Homeland Security Council led by Rajeev Venkayya to come up with a pandemic plan for the country in the eventuality of another pandemic. The book takes a look at the heroic role many people played in getting the Country to act fast and "attack" the virus, and at the same time how the system, manifesting itself many times through the Center for Disease Control (CDC) acted as a stumbling block to the efforts of these "heroes." Here is a Preview of What You Will Get: □ A Full Book Summary □ An Analysis □ Fun quizzes □ Quiz Answers □ Etc Get a copy of this summary and learn about the book.

Educating Health Professionals in Low-Resource Countries Aug 03 2021

The shortage of adequately prepared health professionals is the most significant threat to world health that we face. This book, a co-publication with The Carter Center, focuses on the training of health professional educators--both teachers and practitioners--in low--resource countries at different levels of technological and material sophistication. This comprehensive book trains health educators and practitioners to improve their pedagogical skills and to increase the quality and numbers of health workers. It also assists physicians, nurses, health officers, medical lab technicians, and environmental technicians to work with different cultures and linguistic groups in any one country. For the growing number of health educators and practitioners in developed countries who teach, research, and practice within the international context, it is an essential resource. Key Features: Preface by former US President Jimmy Carter Offers teaching and learning methods evaluated and field tested through The Carter Center's Ethiopia Public Health Training Initiative with positive results in over 500 health care centers Provides both teaching and learning strategies for countries and cultures at different levels of technological and material development Presents research-based theories, evidence--based models, and critical thinking skills through active teaching and learning strategies Highlights faculty leadership in developing interdisciplinary teams and educational outcomes

Saving Lives, Buying Time Oct 05 2021 For more than 50 years, low-cost antimalarial drugs silently saved millions of lives and cured billions of debilitating infections. Today, however, these drugs no longer work against the deadliest form of malaria that exists throughout the world. Malaria deaths in sub-Saharan Africa "currently just over one million per year" are rising because of increased resistance to the old, inexpensive drugs. Although effective new drugs called "artemisinins" are available, they are unaffordable for the majority of the affected population, even at a cost of one dollar per course. *Saving Lives, Buying Time: Economics of Malaria Drugs in an Age of Resistance* examines the history of malaria treatments, provides an overview of the current drug crisis, and offers recommendations on maximizing access to and

effectiveness of antimalarial drugs. The book finds that most people in endemic countries will not have access to currently effective combination treatments, which should include an artemisinin, without financing from the global community. Without funding for effective treatment, malaria mortality could double over the next 10 to 20 years and transmission will intensify.

The Virtues of Aging Aug 23 2020 "We are not alone in our worry about both the physical aspect of aging and the prejudice that exists toward the elderly, which is similar to racism or sexism. What makes it different is that the prejudice also exists among those of us who are either within this group or rapidly approaching it. When I have mentioned the title of this book to a few people, most of them responded, 'Virtues? What could possibly be good about growing old?' The most obvious answer, of course, is to consider the alternative to aging. But there are plenty of other good answers--many based on our personal experiences and observations. " --from THE VIRTUES OF AGING

The Premonition: A Pandemic Story Sep 16 2022 *New York Times* Bestseller For those who could read between the lines, the censored news out of China was terrifying. But the president insisted there was nothing to worry about. Fortunately, we are still a nation of skeptics. Fortunately, there are those among us who study pandemics and are willing to look unflinchingly at worst-case scenarios. Michael Lewis's taut and brilliant nonfiction thriller pits a band of medical visionaries against

the wall of ignorance that was the official response of the Trump administration to the outbreak of COVID-19. The characters you will meet in these pages are as fascinating as they are unexpected. A thirteen-year-old girl's science project on transmission of an airborne pathogen develops into a very grown-up model of disease control. A local public-health officer uses her worm's-eye view to see what the CDC misses, and reveals great truths about American society. A secret team of dissenting doctors, nicknamed the Wolverines, has everything necessary to fight the pandemic: brilliant backgrounds, world-class labs, prior experience with the pandemic scares of bird flu and swine flu...everything, that is, except official permission to implement their work. Michael Lewis is not shy about calling these people heroes for their refusal to follow directives that they know to be based on misinformation and bad science. Even the internet, as crucial as it is to their exchange of ideas, poses a risk to them. They never know for sure who else might be listening in.

Prophet from Plains Jan 20 2023 Prophet from Plains covers Nobel Peace Prize winner Jimmy Carter's major achievements and setbacks in light of what has been at once his greatest asset and his greatest flaw: his stubborn, faith-driven integrity. Carter's remarkable postpresidency is still in the making; however, he has already redefined the role for all

who follow him. Frye Gaillard, who wrote extensively about Carter at the Charlotte Observer, was among the first to take the Carter postpresidency seriously and to challenge many accepted conclusions about Carter's term in office. Carter was not an irresolute president, says Gaillard, but rather one so certain of his own rectitude that he misjudged the importance of "selling" himself to America. Ranging across the highs and lows of the Carter presidency, Gaillard covers the energy crisis, the Iran hostage situation, the Camp David Accords, the Panama Canal and other treaties, and the new diplomatic emphasis on human rights. Carter's established priorities did not change once he was out of office, but he was far more effective outside the strictures of presidential politics. Gaillard's coverage of this period includes Carter's friendship with Gerald R. Ford, his work through the Carter Center on disease control and election monitoring, and his association with Habitat for Humanity. Prophet from Plains locates Carter in the tradition of Old Testament prophets who took uncompromising stands for peace and justice. Resisting the role of an above-the-fray elder statesman, Carter has thrust himself into international controversies in ways that some find meddlesome and others heroic.

The Eradication of Dracunculiasis (Guinea Worm Disease) in Nigeria Nov 13 2019 The Eradication of Dracunculiasis (Guinea Worm Disease) in Nigeria: An Eyewitness Account documents the process used to eradicate one of the most neglected public health challenges in Nigeria. The book's chapters discuss the need for well developed and implemented eradication strategies, the availability of human and material resources, and the collaboration that is necessary with international partners. In addition, sections highlight challenges, the benefits of perseverance, and the international support and multi-sectoral approach that is needed to tackle national problems. It demonstrates that other endemic tropical diseases and conditions can be eliminated or controlled if a similar approach is adopted. Summarizes the status of the global campaign to eradicate dracunculiasis in Nigeria Gives a comprehensive account of what Dracunculiasis is from the author's earliest encounters, covering its mode of transmission and

impact Contains a comprehensive and very fascinating account of the eradication experience in Nigeria, (the most endemic country in the world at the onset) through a multi-sectoral eradication strategy in collaboration with Global 2000-The Carter Center, UNs other NGOs

His Very Best Mar 10 2022 “Drawing on fresh archival material and extensive access to Carter and his family, New York Times bestselling author Jonathan Alter tells the epic story of a man of faith and his improbable journey from barefoot boy in the vicious Jim Crow South to global icon. We learn how Carter evolved from a timid child into an ambitious naval nuclear engineer and an indefatigable born-again governor; how as a president he failed politically amid the bad economy of the 1970s and the seizure of hostages in Iran but succeeded in engineering peace between Israel and Egypt, amassing a historic environmental record, moving the government from tokenism to diversity, setting a new global standard for human rights, and normalizing relations with China, among dozens of other unheralded achievements. After leaving office, Carter revolutionized the postpresidency with the bold global accomplishments of the Carter center” --Cover.

Oatland Island: Photographs and History Dec 27 2020 Oatland Island, located five miles east of Savannah, Georgia, has a unique history. Although it is an education center today, the walls once housed retired railroad conductors, patients, scientists, inventors, and teachers. This book showcases various photographs of the Oatland Island facilities, and documents the rich history and stories of its evolution from a retirement community for the Order of Railway Conductors, to a United States Public Health Service research hospital, to the original location of

the Centers for Disease Control, and to the Oatland Island Wildlife Center of Savannah, Georgia.

Beyond the White House Jun 13 2022 The president’s personal and passionate account of his twenty-five years in the service of humanitarian effort that won him the Nobel Peace Prize was received with the admiring respect of reviewers and readers and it will stand as the record of his brilliant post-presidential career. This is the story of President Jimmy Carter’s post-presidency, the most admired and productive in the nation’s history. Through The Carter Center, which he and Rosalynn Carter founded in 1982, he has fought neglected diseases, waged peace in war zones, and built hope among some of the most forgotten and needy people in the world. Serving in more than seventy nations, Carter has led peacekeeping efforts for Ethiopia, North Korea, Haiti, Bosnia and Herzegovina, Uganda, and Sudan. With his colleagues from The Carter Center, he has monitored more than sixty-five elections in troubled nations, from Palestine to Indonesia. Carter’s bold initiatives, undertaken with dedicated colleagues, have eliminated, prevented, or cured an array of diseases that have been characterized as “neglected” by the World Health Organization and that afflict tens of millions of people unnecessarily. The Carter Center has taught millions of African families how to increase the production of food grains, and Rosalynn Carter has led a vigorous war against the stigma of mental illness around the world. “Immersing ourselves among these deprived and suffering people has been a great blessing as it stretched our minds and hearts,” Jimmy Carter writes. “The principles of The Carter Center have been the same ones that should characterize our nation, or any individual. They are the beliefs inherent in all the great world religions, including commitments to peace, justice, freedom, humility, forgiveness or an attempt to find accommodation with potential foes, generosity, human rights or fair treatment of others, protection of the environment, and the alleviation of suffering. This is our agenda for the future.”

Critical Care Nursing in Resource Limited Environments Jul 02 2021 All hospitals have critically ill patients, and their management depends upon the resources available. In many low income countries,

critically ill patients may be admitted to a critical care unit; however, many are nursed on wards due to a lack of critical care beds or simply die before they reach the hospital. This book provides guidance on the unique situations for nurses working in these challenging environments, while considering ethical decision-making, providing appropriate services, and the types of patients admitted. Topics covered include: working in a resource limited environment; cultural awareness and international agendas; provision and access to healthcare services; ethical considerations in the context of resource limited environments; best practice and knowledge regarding rehabilitation, pain management, managing a major incident; relevant research concerning resource limited environments. Critical Care Nursing in Resource Limited Environments prepares readers to consider how best to utilise their skills and deliver safe patient care within a resource limited context. Each easy-to-read chapter provides core knowledge and relevant research, as well as useful ideas and solutions, with further reading sections to signpost readers to key international resources. This text provides practical ideas for nurses working in critical care and defence nursing, and acute areas in resource limited environments. It can also be used to support educational courses and pre-deployment training for nurses hoping to work in Global Health.

Psychopathology May 12 2022 Carter's Psychopathology is an accessible, engaging, and well-organized text covering the study, understanding, diagnosis, treatment, and prevention of psychological disorders. Fully integrating gender and culture in the presentation of mental disorders, and using a sensitive and inclusive language to encourage an empathic approach to psychopathology, this introductory textbook offers students a strong foundation of the socio-cultural factors influencing how we treat mental disorders. Featuring: boxes such as 'the power of words', promoting the use of respectful, empathic language, and 'the power of evidence', demonstrating that scientific evidence can answer questions about psychopathology treatments; real-world case studies and examples; 'concept checks' questions to test the student's mastery of the material covered in each section; chapter summaries

listing the 'take-home' points discussed; and key terms and glossary highlighting terms that students will need to understand and become familiar with, this textbook provides a hands-on approach to the study of psychopathology.
