Economic Analysis of Institutions and Systems aims to redirect the study of what was previously referred to as comparative economic systems toward analysis of the history and development of institutions, and the effects of alternative institutional arrangements on economic behavior. To this end, the book internalizes into a theoretical framework: (i) the effects of alternative institutions on the costs of transactions and incentive structures; (ii) the effects of the costs of transactions and incentives on economic behavior, and (iii) the evidence for refutable implications of those effects. In the process, it provides the logical premises for various institutions from which refutable implications can be deduced. Truett and Truett's Eighth Edition shows how to use economic analysis to solve problems and make effective decisions in the complex world of business. The highly successful problem-solving approach, clear and accurate presentation of economic theory, and outstanding cases combine to make the best presentation of managerial economics yet. Walks readers step by step through specific types of problems, including elasticity calculations, cost minimization, and profit maximization. Shows how real-world firms have addressed issues discussed in the book. Emphasizes the global aspects of managerial economics and its application in the international marketplace. This study examines: the manner in which Florida licenses liquor retailers, the beverage tax imposed by the State with its economic effects, and the license fee structure of vendors licenses. There is a small and growing literature that explores the impact of digitization in a variety of contexts, but its economic consequences, surprisingly, remain poorly understood. This volume aims to set the agenda for research in the economics of digitization, with each chapter identifying a promising area of research. Economics of Digitization identifies urgent topics with research already underway that warrant further exploration from economists. In addition to the growing importance of digitization itself, digital technologies have some features that suggest that many well-studied economic models may not apply and, indeed, so many aspects of the digital economy throw normal economics in a loop. Economics of Digitization will be one of the first to focus on the economic implications

of digitization and to bring together leading scholars in the economics of digitization to explore emerging research. How has exploration for minerals evolved in recent years? Is it as productive an activity as it once was? Why have changes occurred? Roderick G. Eggert explores these and other questions about the complex set of circumstances surrounding metallic mineral exploration. Originally published in 1987, Eggert documents trends in the level and the distribution of expenditures by mining companies for metallic mineral exploration and examines a number of factors that may be responsible for these trends. This significant study serves as a handy introduction to the subject for students interested in environmental studies, natural resources, and economics. "Policy-makers often call for expanding public spending on infrastructure, which includes a broad range of investments from roads and bridges to digital networks that will expand access to high-speed broadband. Some point to near-term macro-economic benefits and job creation, others focus on long-term effects on productivity and economic growth. This volume explores the links between infrastructure spending and economic outcomes, as well as key economic issues in the funding and management of infrastructure projects. It draws together research studies that describe the short-run stimulus effects of infrastructure spending, develop new estimates of the stock of U.S. infrastructure capital, and explore the incentive aspects of public-private partnerships (PPPs). A salient issue is the treatment of risk in evaluating publicly-funded infrastructure projects and in connection with PPPs. The goal of the volume is to provide a reference for researchers seeking to expand research on infrastructure issues, and for policy-makers tasked with determining the appropriate level of infrastructure spending"--

Economic Analysis of the Arbitrator's Function Bruno Guandalini Arbitration has become an important market, where arbitrators are rational economic agents maximizing their utility. Although this is self-evident, it is rarely discussed. This penetrating book is the first to comprehensively analyze the market for arbitrators and arbitrators' economic role within it. In great depth, the author tackles such salient issues as the following: effect of perceived inefficiencies and high costs on arbitration legitimacy; alleged commercialization of the arbitrator's function; possible ethical problem raised by financial remuneration for rendering justice; what motivates a person to arbitrate; market for arbitrators' functioning and failures, providing a better understanding of how actors could behave in such a specific market; structural and artificial entry barriers; effect of an arbitrator's strategic behavior on the arbitrator's function; limitations on an arbitrator's rationality; and preventing and correcting these limitations. Numerous references to customs and procedures in major arbitral jurisdictions and to international laws and conventions affecting the efficiency of the arbitrator's function are included. Pursuing a non-prescriptive analysis, the author draws on the discipline of law and economics, rational choice theory, behavioral economics, and psychological work on bounded rationality. Understanding the arbitrator's function as a legal institution that is influenced by the market, this pioneer in developing and systematizing the study of the market for arbitrators and how it works will prove of inestimable value to all stakeholders in the arbitration market. Arbitrators, policymakers, regulators, and academics will be enabled to open the way to a more efficient market for arbitrators and betterment in arbitration worldwide. This study, which was requested by the Assistant Secretary of Defense, Comptroller, attempts to evaluate the role and functions of the Defense Economic Analysis Council (DEAC), as outlined in DoD Instruction 7041.3, to support economic analyses and improve the management of programs and activities in the Department of Defense (DoD). Consequently, there is an examination of the DEAC's history, organization, and activities to identify its accomplishments and shortcomings toward the economic analysis program. The study also examines the directives which guide the economic analysis endeavor, the educational aspects for it, and the status of the total economic analysis/program evaluation effort in the DoD. A major conclusion is that the DEAC no longer provides the benefits it once did and should be abolished. Also, because of a lack of coordination and conflicting directives at the OSD functional level, and an absence of appropriate emphasis at the Office of the Secretary of Defense level, economic analyses are less than could be expected of so important an effort. The report presents suggested recommendations intended to improve the conduct of economic analysis in the DoD. (Author). This book provides a historical economic analysis of two key issues relating to township and village enterprise (TVE) development in China. Firstly, the nature of the evolving relationship between TVEs and local government; in particular how TVE entrepreneurs have used institutionalized power to secure the political influence needed to defend their financial independence. Secondly, the relationship between TVEs and state-owned enterprises (SOEs), and the role of SOEs in China's economic transition. This study highlights the importance of the role of SOEs in the "dual-track pricing system" and its impact on other parts of the economy. Township and village enterprises

were key to China's success in the late twentieth century, but have more or less disappeared as an entity over the past decade or so. By measuring the structural difference of the SOE sector before and after 1998–2003 SOE reform, Jin explains their fast catch-up in productivity since the mid-1990s, as well as the relative decline of TVE productivity.
