Band Theory and Electronic Properties of Solids Aug 21 2022 This book provides an introduction to band theory and the electronic properties of materials at a level suitable for final-year undergraduates or first-year graduate students. It sets out to provide the vocabulary and quantum-mechanical training necessary to understand the electronic, optical and structural properties of the materials met in science and technology and describes some of the experimental techniques which are used to study band structure today. In order to leave space for recent developments, the Drude model and the introduction of quantum statistics are treated synoptically. However, Bloch's theorem and two tractable limits, a very weak periodic potential and the tight-binding model, are developed rigorously and in three dimensions. Having introduced the ideas of bands, effective masses and holes, semiconductor and metals are treated in some detail, along with the newer ideas of artificial structures such as

super-lattices and quantum wells, layered organic substances and oxides. Some recent 'hot topics' in research are covered, e.g. the fractional Quantum Hall Effect and nano-devices, which can be understood using the techniques developed in the book. In illustrating examples of e.g. the de Haas-van Alphen effect, the book focuses on recent experimental data, showing that the field is a vibrant and exciting one. References to many recent review articles are provided, so that the student can conduct research into a chosen topic at a deeper level. Several appendices treating topics such as phonons and crystal structure make the book self-contained introduction to the fundamentals of band theory and electronic properties in condensed matter physics today. *The Oxford Solid State Basics* Dec 21 2019 This is a first undergraduate textbook in Solid State Physics or Condensed Matter Physics. While most textbooks on the subject are extremely dry, this book is written to be much more exciting, inspiring, and entertaining. Oxford Series in Social Cognition and Social Neuroscience Dec 01 2020 *Doomsday Book* Sep 29 2020 "A tour de force."—The New

York Times Book Review  
Connie Willis draws upon her understanding of the universalities of human nature to explore the ageless issues of evil, suffering, and the indomitable will of the human spirit. For Kivrin, preparing an on-site study of one of the deadliest eras in humanity's history was as simple as receiving inoculations against the diseases of the fourteenth century and inventing an alibi for a woman traveling alone. For her instructors in the twenty-first century, it meant painstaking calculations and careful monitoring of the rendezvous location where Kivrin would be received. But a crisis strangely linking past and future strands Kivrin in a bygone age as her fellows try desperately to rescue her. In a time of superstition and fear, Kivrin—barely of age herself—finds she has become an unlikely angel of hope during one of history's darkest hours.

Modern Classical Optics Oct 19 2019 Praised as 'one of the best new optics books seen for some time', this book will provide a unique presentation of classical optics from the modern perspective. Written for advanced undergraduate students, the text stands out by its readability and stimulating discussions, close ties to experimental physics, and excellent choice of worked problem sets.

*Computational Molecular Evolution* Apr 17 2022 This book describes the models,

methods and algorithms that are most useful for analysing the ever-increasing supply of molecular sequence data, with a view to furthering our understanding of the evolution of genes and genomes.

**Magnetism in Condensed Matter** Nov 12 2021 An understanding of the quantum mechanical nature of magnetism has led to the development of new magnetic materials which are used as permanent magnets, sensors, and information storage. Behind these practical applications lie a range of fundamental ideas, including symmetry breaking, order parameters, excitations, frustration, and reduced dimensionality. This superb new textbook presents a logical account of these ideas, starting from basic concepts in electromagnetism and quantum mechanics. It outlines the origin of magnetic moments in atoms and how these moments can be affected by their local environment inside a crystal. The different types of interactions which can be present between magnetic moments are described. The final chapters of the book are devoted to the magnetic properties of metals, and to the complex behaviour which can occur when competing magnetic interactions are present and/or the system has a reduced dimensionality. Throughout the text, the theoretical principles are applied to real systems. There is substantial discussion of experimental techniques and current research topics. The book is copiously illustrated

and contains detailed appendices which cover the fundamental principles.  
**Endocrine Disruptors, Brain, and Behavior** Feb 15 2022 Our world and bodies are becoming increasingly polluted with chemicals capable of interfering with our hormones and thus, possibly, our present and future neural and mental health. As authors Heather Patisaul and Scott Belcher outline, there is a large lack of data and evidence in this causal relationship, which begs a need for further study to accelerate progress in the endocrinology and neuroendocrinology fields. *Endocrine Disruptors, Brain, and Behavior* focuses on if and how these chemicals, known as endocrine disrupting compounds (EDCs), affect the development and function of the brain and might be contributing to neural disorders rapidly rising in prevalence. The book provides an overall synthesis of the EDC field, including its historical roots, major hypotheses, key findings, and research gaps. The authors explain why even the concept of endocrine disruption is controversial in some circles, how differing definitions of endocrine disruption and what constitutes an "adverse" outcome on the brain shape public policy, and where the current capacity by different stakeholders (industry, academia, regulatory agencies) to evaluate chemicals for safety in a regulatory context begins and ends. The book concludes with suggestions for future research needs and a summary of

emerging technology which might prove capable of more effectively evaluating existing and emerging chemicals for endocrine disrupting properties. As such, it provides the context for interdisciplinary and innovative input from a broad spectrum of fields, including those well-schooled in neuroscience, evolutionary biology, brain, behavior, sex differences, and neuroendocrinology.

**Reconstruction** Jan 02 2021

In this chillingly plausible thriller by CWA Gold Dagger winner Mick Herron, "there is no hiding under the desk" (The New York Times Book Review). When a gunman breaks into South Oxford Nursery School and takes a group of hostages, teacher Louise Kennedy fears the worst. But Jaime Segura isn't there on a homicidal mission, and he's just as scared as those whose lives he holds as collateral. As an armed police presence builds outside the school's gates, the only person Jaime will talk to is Ben Whistler, an MI6 accountant who worked with Jaime's lover, Miro. Miro's gone missing, along with a quarter of a billion pounds allotted for reconstruction work in Iraq. Jaime refuses to believe that Miro is a thief—though he's always had his secrets. But then, so does Louise, so do the other hostages—and so do some people on the outside, who'd much rather Jaime was silenced. From the Trade Paperback edition.

**Down Cemetery Road** Jan 14 2022 The acclaimed first novel from Mick Herron.

**The Archive Thief** Jan 22

2020 In the aftermath of the Holocaust, Jewish historian Zosa Szajkowski gathered up tens of thousands of documents from Nazi buildings in Berlin, and later, public archives and private synagogues in France, and moved them all, illicitly, to New York. In *The Archive Thief*, Lisa Moses Leff reconstructs Szajkowski's story in all its ambiguity. Born into poverty in Russian Poland, Szajkowski first made his name in Paris as a communist journalist. In the late 1930s, as he saw the threats to Jewish safety rising in Europe, he broke with the party and committed himself to defending his people in a new way, as a scholar associated with the YIVO Institute for Jewish Research. Following a harrowing 1941 escape from France and U.S. army service, Szajkowski struggled to remake his life as a historian, eking out a living as a YIVO archivist in postwar New York. His scholarly output was tremendous nevertheless; he published scores of studies on French Jewish history that opened up new ways of thinking about Jewish emancipation, modernization, and the rise of modern antisemitism. But underlying Szajkowski's scholarly accomplishments were the documents he stole, moved, and eventually sold to American and Israeli research libraries, where they remain today. Part detective story, part analysis of the construction of history, *The Archive Thief* offers a window into the debates over the rightful ownership of contested Jewish

archives and the powerful ideological, economic, and psychological forces that have made Jewish scholars care so deeply about preserving the remnants of their past.

**The Ethics of Architecture**

Nov 19 2019 "The Ethics of Architecture offers a short and approachable scholarly introduction to a timely question: in a world of increasing population density, how does one construct habitable spaces that promote social goals like health, happiness, environmental friendliness, and justice? What are the special ethical obligations assumed by architects? Because their work creates the basic material conditions that make all other human activity possible, architects and their associates in building enjoy vast influence on how all we live, work, play, worship, and think. With this influence comes tremendous, and not always examined, responsibility. This book addresses the range of ethical issues that architects face, with a broad understanding of ethics. Beyond strictly professional duties - transparency, technical competence, fair trading - lie more profound issues that move into aesthetic, political, and existential realms. Does an architect have a duty to create art, if not always beautiful art? Should an architect feel obliged to serve a community and not simply the client? Is social justice a possible orientation for architectural practice? Is there such a thing as feeling compelled to "shelter being" in architectural work? By taking

these usually abstract questions into the region of physical creation, the book attempts a concrete reformulation of "architectural ethics" as a matter of deep reflection on the architect's role as both citizen and caretaker. Thinkers and makers discussed include Le Corbusier, Martin Heidegger, Lewis Mumford, Rem Koolhaas, Jane Jacobs, Arthur Danto, and John Rawls. An added preface addresses architectural issues arising during and after the 2020 COVID-19 pandemic"--

**Modern Classical Optics** Apr 05 2021 The book describes classical (non-quantum) optical phenomena and the instruments and technology based on them. It includes many cutting-edge areas of modern physics and its applications which are not covered in many larger and more expensive books.

*The Last Voice You Hear* Oct 31 2020 Oxford private investigator Zoë Boehm struggles with the aftereffects of her violent past as she hunts for a killer—or has she become the hunted? Zoë Boehm has harbored a distinct aversion to death ever since she shot the man intent on killing her. So when Caroline Daniels takes a deadly fall in front of a train and her lover fails to turn up at the funeral, Zoë wants nothing to do with the case. But Caroline's boss is persistent, and as Zoë attempts to unlock the secrets of a woman she's never met while in search of a man who could be anywhere, she starts to wonder if he's found her first. And if he has, will that make her the next

victim, or prove to be her salvation from a paralyzing fear? From the Trade Paperback edition.

**Memory and Law** Jun 07 2021 How well does memory work, how accurate is it, and can we tell when someone is reporting an accurate memory? Can we distinguish a true memory from a false one? Can memories be selectively enhanced, or erased? Are memories altered by emotion, by stress by drugs? These questions and more are addressed in this book.

**Smoke and Whispers** May 06 2021 Oxford private detective Zoë Boehm turns up dead in Newcastle, launching her friend Sarah Tucker into an investigation with several leads—but no one she can trust. When a body is hauled from the River Tyne, Sarah Tucker heads to Newcastle for a closer look. She identifies the dead woman as private detective Zoë Boehm, but putting a name to the corpse only raises further questions. Did Zoë kill herself, or did one of her old cases come back to haunt her? Why was she wearing the jacket a murderer had stolen years before? And what's brought Sarah's former sparring partner Gerard Inchon to the same broken-down hotel where she's staying? Coincidence is an excuse that soon appears pretty unconvincing. Sarah can't leave until she's found the answers to her questions, however dangerous they might turn out to be. From the Trade Paperback edition.

**Why We Die** Aug 09 2021 The road to hell is paved with all sorts of intentions, as Oxford

private investigator Zoë Boehm discovers when a straightforward jewelry store robbery turns out to be anything but. When Zoë Boehm agrees to track down the gang who knocked over Sweeney's jewelry shop, she's just hoping to break even in time for tax season. She certainly doesn't expect to wind up in a coffin. But she's about to become entangled with a strange collection of characters, starting with suicidal Tim Whitby, who's dedicating what's left of his life to protecting the pretty, battered Katrina Blake from her late husband's sociopathic brothers, Arkle and Trent. Unfortunately for Zoë, Arkle has a crossbow, Tim has nothing left to lose, and even Katrina has her secrets. And death, like taxes, can't be avoided forever. From the Trade Paperback edition.

*I Wish You Were Mine* Mar 16 2022 USA TODAY BESTSELLER • In this charming Oxford Novel, hailed by Keri Ford as "a sizzling-loud friends-to-lovers story," Lauren Layne poses a provocative question: What do you do when you fall in love with your sister's ex? A year ago, Jackson Burke was married to the love of his life and playing quarterback for the Texas Redhawks. Now he's retired, courtesy of the car accident that ruined his career—and single, after a nasty scandal torpedoed his marriage. Just as he's starting to get used to his new life as a health and fitness columnist for Oxford magazine, his unpredictable ex shows up on his doorstep in Manhattan. Jackson should be thrilled. But

he can't stop thinking about the one person who's always been there for him, the one girl he could never have: her younger sister. Mollie Carrington can't say no to Madison. After all, her older sister practically raised her. So when Madison begs for help in winning her ex-husband back, Mollie's just glad she got over her own crush on Jackson ages ago—or so she thought. Because as Mollie reconnects with Jackson, she quickly forgets all her reasons to stay loyal to her sister. Tempted by Jackson's mellow drawl and cowboy good looks, Mollie is sick and tired of coming in second place. But she can't win if she doesn't play the game. Praise for *I Wish You Were Mine* "A smart, sexy, and absolutely irresistible read!"—USA Today bestselling author Mira Lyn Kelly "I Wish You Were Mine is a sizzling-loud friends-to-lovers story with a unique twist of my-sister's-ex-husband. Maybe not—and if it doesn't, who, if anyone, benefits from the altered behaviors? The parasite? The ant? *Parasites and the Behavior of Animals* shows that parasite-induced behavioral alterations are more common than we might realize, and it places these alterations in an evolutionary and ecological context. Emphasizing eukaryotic parasites, the book examines the adaptive nature of behavioral changes associated with parasitism, exploring the effects of these changes on parasite transmission, parasite avoidance, and the fitness of both host and parasite. The behavioral changes and their effects are not always straightforward. To the extent that virulence, for instance, is linked to parasite transmission, the evolutionary interests of parasite and host will diverge, and the current winner of the contest to maximize reproductive rates may not be clear, or, for that matter, inevitable. Nonetheless, by affecting susceptibility, host/parasite lifespan and fecundity, and transmission itself, host behavior influences parameters that are basic to

our comprehension of how parasites invade host populations, and fundamentally, how parasites evolve. Such an understanding is important for a wide range of scientists, from ecologists and parasitologists to evolutionary, conservation and behavioral biologists: The behavioral alterations that parasites induce can subtly and profoundly affect the distribution and abundance of animals.

**I Think I Love You** Oct 23 2022 USA TODAY BESTSELLER • A game of seduction between two best friends goes deliciously wrong in an irresistible Oxford Novel that brims with wit and sexual tension. Library Journal hails Layne's work as "exemplary contemporary romance." Brit Robbins knows that dating in New York City is hard—she just hoped to have it mastered by age thirty. But after yet another promising suitor says they have no sparks, Brit decides it's time to torch her dating game and try a new plan. And who better to coach Brit through the art of seduction than the guy who first gave her the "let's be friends" card? Hunter Cross has always figured there's nothing his best friend Brit can do to surprise him. But Brit's request is a surprise he doesn't see coming—and one he's definitely not prepared for. Hunter and Brit have always been careful to keep things perfectly platonic, but the fake dates and faux flirting are starting to feel like the real deal. And soon Hunter realizes he has taught Brit too well. Not

only has she become an expert at seduction, the man becoming thoroughly seduced is him. **Processing the Past** Sep 10 2021 *Processing the Past* explores the dramatic changes

taking place in historical understanding and archival management, and hence the relations between historians and archivists. Written by an archivist and a historian, it shows how these changes have been brought on by new historical thinking, new conceptions of archives, changing notions of historical authority, modifications in archival practices, and new information technologies. The book takes an "archival turn" by situating archives as subjects rather than places of study, and examining the increasingly problematic relationships between historical and archival work. By showing how nineteenth- and early twentieth-century historians and archivists in Europe and North America came to occupy the same conceptual and methodological space, the book sets the background to these changes. In the past, authoritative history was based on authoritative archives and mutual understandings of scientific research. These connections changed as historians began to ask questions not easily answered by traditional documentation, and archivists began to confront an unmanageable increase in the amount of material they processed and the challenges of new electronic technologies. The authors contend that historians and archivists have divided into two entirely separate professions with distinct conceptual frameworks, training, and purposes, as well as different understandings of

the authorities that govern their work. *Processing the Past* moves toward bridging this divide by speaking in one voice to these very different audiences. Blouin and Rosenberg conclude by raising the worrisome question of what future historical archives might be like if historical scholars and archivists no longer understand each other, and indeed, whether their now different notions of what is archival and historical will ever again be joined.

*Someone Like You* Jun 19 2022 Fans of Julie James, Carly Phillips and Chanel Cleeton - meet the men of Oxford magazine! Lauren Layne's bestselling Oxford Series continues with *Someone Like You*, the poignant, heartwarming story of New York's most eligible bachelor, Lincoln Mathis, a man who's living a lie - until his dream woman takes away the pain. Lincoln Mathis doesn't hide his reputation as Manhattan's ultimate playboy. In fact, he cultivates it. But behind every flirtatious smile, each provocative quip, there's a secret that Lincoln's hiding from even his closest friends - a tragedy from his past that holds his heart quietly captive. Lincoln knows what he wants: someone like Daisy Sinclair, the sassy, off-limits bridesmaid he can't take his eyes off at his best friend's wedding. He also knows that she's everything he can never have. After a devastating divorce, Daisy doesn't need anyone to warn her off the charming best man at her sister's wedding. One look at the breathtakingly hot

Lincoln Mathis and she knows that he's exactly the type of man she should avoid. But when Daisy stumbles upon Lincoln's secret, she realizes there's more to the charming playboy than meets the eye. And suddenly Daisy and Lincoln find their lives helplessly entwined in a journey that will either heal their damaged souls...or destroy them forever. Want more fun, fresh, flirty and very sexy rom-com? Check out all the titles in the Oxford series: Irresistibly Yours, I Wish You Were Mine and Someone Like You, and don't miss the warm, witty and sexy Wedding Belles series. Can a guy and a girl really be 'just friends'? You won't want to miss Lauren Layne's sexy take on this timeless question in Blurred Lines.

**The Causes of Molecular Evolution** Jul 20 2022 This work provides a unified theory that addresses the important problem of the origin and maintenance of genetic variation in natural populations. With modern molecular techniques, variation is found in all species, sometimes at astonishingly high levels. Yet, despite these observations, the forces that maintain variation within and between species have been difficult subjects of study. Because they act very weakly and operate over vast time scales, scientists must rely on indirect inferences and speculative mathematical models. However, despite these obstacles, many advances have been made. The author's research in molecular genetics,

evolution, and bio-mathematics has enabled him to draw on this work, and present a coherent and valuable view of the field. The book is divided into three parts. The first consists of three chapters on protein evolution, DNA evolution, and molecular mechanisms. This section reviews the experimental observations on genetic variation. The second part gives a unified treatment of the mathematical theory of selection in a fluctuating environment. The final two chapters combine the earlier assessments in a treatment of the scientific status of two competing theories for the maintenance of genetic variation. Steeped in the enormous advances population genetics has made over the past 25 years, this book has proven highly popular among human geneticists, biologists, evolutionary theorists, and bio-mathematicians.

**Linguistics** Jun 26 2020 This is an introduction to linguistics, the study of human language. The author provides a succinct but lucid outline of the ways in which language has been defined, described, and explored, and guides readers towards further exploration of their own.

**Evolutionary Biomechanics** Nov 24 2022 This title discusses the study of evolution through the analysis of biomechanical systems. Instead of reviewing the entire breadth of the biomechanical literature, a few key examples are explored in depth as vehicles

for discussing fundamental concepts, analytical techniques, and evolutionary theory.

The Principles of Design Jul 28 2020 Here is a basic introduction to the principles of industrial design and their application in all phases of planning and production. It is intended to offer experienced instruction, based on scientific knowledge, in place of the intuitive approach to the field often encountered in engineering practice and education. The book presents basic principles and constitutes an exposition of these fundamental axioms and their application. The emphasis is on identifying problems in a clear, scientific manner, so that the correct solution may be arrived at regardless of the mathematical treatment involved. In particular, the importance of conceptualizing design approaches--a uniquely human, intellectual skill--is highlighted, since too often educators and engineers try to limit this process to computer techniques. Case studies are extensively presented to illustrate the significance as well as the use of the axioms in solving real problems. The work is based on extensive experience at M.I.T's Laboratory for Manufacturing and Productivity, where axiomatics is a major program. The goal of the program is to bring a scientific approach to the decision-making process related to manufacturing--an approach that facilitates

rational design of processes and products, as well as the optimization of manufacturing systems.

**Irresistibly Yours** Feb 27 2023 Meet the men of Oxford magazine! In the first captivating spin-off of Lauren Layne's Sex, Love & Stiletto series, a not-so-friendly battle of the sexes turns into a scorching office romance. Hotshot sports editor Cole Sharpe has been freelancing for Oxford for years, so when he hears about a staff position opening up, he figures he's got the inside track. Then his boss drops a bombshell: Cole has competition. Female competition, in the form of a fresh-faced tomboy who can hang with the dudes—and write circles around them, too. Cole usually likes his women flirty and curvy, but he takes a special interest in his skinny, sassy rival, if only to keep an eye on her. And soon, he can't take his eyes off her. Penelope Pope knows all too well that she comes off as just one of the guys. Since she's learned that wanting more usually leads to disappointment, Penelope's resigned to sitting on the sidelines when it comes to love. So why does Cole make her want to get back in the game? The man is as arrogant as he is handsome. He probably sees her as nothing more than a barrier to his dream job. But when an unexpected kiss turns into a night of irresistible passion, Penelope has to figure out whether they're just fooling around—or starting something real. Representations of core cognition are the output of dedicated input analyzers, as with perceptual representations, but these core representations differ from perceptual representations in having more abstract contents and richer functional roles. Carey argues that the key to understanding cognitive development lies in recognizing conceptual discontinuities in which new representational systems emerge that have more expressive power than core cognition and are also incommensurate with core cognition and other earlier representational systems. Finally, Carey fleshes out Quinian bootstrapping, a learning mechanism that has been repeatedly sketched in the literature on the history and philosophy of science. She demonstrates that Quinian bootstrapping is a major mechanism in the construction of new representational resources over the course of children's cognitive development. **Oxford Series on European Community Law** Aug 29 2020 **Oxford Series. **Stem Cells: A Very Short Introduction** Mar 24 2020 The

topic of stem cells has a high profile in the media. We've made important advances in our scientific understanding, but despite this the clinical applications of stem cells are still in their infancy and most real stem cell therapy carried out today is some form of bone marrow transplantation. At the same time, a scandalous spread of unproven stem cell treatments by private clinics represents a serious problem, with treatments being offered which are backed by limited scientific rationale, and which are at best ineffective, and at worse harmful. This Very Short Introduction introduces stem cells, exploring what they are, and what scientists do with them. Introducing the different types of stem cells, Jonathan Slack explains how they can be used to treat diseases such as retinal degeneration, diabetes,

Parkinson's disease, heart disease, and spinal trauma. He also discusses the important technique of bone marrow transplantation and some other types of current stem cell therapy, used for the treatment of blindness and of severe burns. Slack warns against fake stem cell treatments and discusses how to distinguish real from fake treatments. He also describes the latest scientific progress in the field, and looks forward to what we can expect to happen in the next few years Very Short Introductions: Brilliant, Sharp, Inspiring ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.
