Being a profession as old as mankind itself, the mere word "mercenary" often triggers images of danger, toughness, adventure, deadly skills, sex and money in a life as exotic and unreal as some classic action movie. Often said to no longer exist, rendered obsolete by the multi-million dollar private military companies that reshaped private warfare since 2001, mercenaries in the classic way continued their existence and work without any real changes, except for a rise in both overall demand and sorts of opportunities to work since the 80s and 90s, when their existence was proved on photos in the famous publications like "Soldier of Fortune", "Gung Ho" and some of the best of the trade took the time and effort to even write manuals on how to get into that dangerous, demanding and often outright crazy occupation. Seasoned and experienced mercs like Paul Balor in his "Manual of the Mercenary soldier" or Frank J. Camper, running his "Mercenary School" and publishing several books including the original "Mercenary Operations Manual" in 1986 and "Live to spend it" opened that hidden world, together with an opportunity to become a part of it, to anybody dedicated enough to pay the price in sweat, blood, hunger and sleep deprivation. Yet, the changes of our world and its wars together with all the naysayers in the big www claiming the old-school mercenary type to be long vanished, made an update necessary. Here it is. No matter if you're eager to start a full-time career as a hired gun, want more information about this trade to decide if it's for you or you're only curious, you'll get your answers. Or, maybe, you simply want to acquire the skills and know-how of a professional mercenary to improve your chances of protecting those you care about in a world of wars lacking frontlines; wars that don't end on borders in lands far away but instead are fought by enemy forces that might carry out their next attack in a church, a shopping mall or cinema in your hometown! This book's goal is to make sure that you are prepared for participating in any modern war as an independent, single operator - increasing to the maximum your chances to "live to spend it".

In contrast to mobile combat, a siege centers around a fixed location, historically ranging from simple hill forts through to entire fortified cities. For the defenders, their job has been to preserve the integrity of defenses, keep out the attackers, and maintain health, hygiene and nutrition until the siege is broken. The attackers, by contrast, have utilized a mixture of guile, patience, technology and brute force to wear down their opponents, smash through the defenses and force submission. The landing of Allied forces on the shores of Normandy on 6 June 1944 was the greatest amphibious invasion in history. Technology and innovation played crucial parts in the D-Day drama - from tank-carrying gliders, swimming tanks and the Mulberry harbors, to radio and radar aids that ensured landing craft arrived on the right beaches and combat aircraft overhead were controlled. *D-Day Operations Manual* describes the development, construction and use of a wide range of innovative machines, structures and systems, explaining their uses on D-Day and after, and revealing how they contributed to the success of 'Overlord.' Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient. Published to coincide with the 50th anniversary of the first Moon landing by Apollo 11. The story of Apollo has been told many times, but most accounts stop at the first landing. This book picks up where others have left off, and describes the five post-Apollo 11 Moon landings, defined as technical developments built upon engineering excellence. It was only through the robust design adopted when aerospace contractors first designed and built the Apollo spacecraft and the Lunar Module that successive evolutions were possible, taking lunar-landing operations far beyond what had first been envisaged. This book is not intended to tell the full story of each mission, but rather to describe the technical development of spacecraft and equipment necessary to grow the capability from a single EVA ('moonwalk') of less than three hours, to advanced missions where astronauts spent three full working days exploring their landing sites. With the aid of a Lunar Roving Vehicle, they collected a wide variety of rocks and soil and left a range of instruments at the surface powered by a thermonuclear generator. As interest grows in humans returning to the Moon, 50 years on from those pioneering days of lunar exploration, we look again at what was accomplished at the dawn of the Space Age, spurred on by a political goal and developed as a tool for science. The story of the Apollo Moon missions is an expression of those achievements. The COVID-19 outbreak in Wuhan, Hubei, saw great numbers of patients overwhelming the admission capacity of designated infectious diseases hospitals, which in turn led to insufficient medical supplies fulfilling treatment needs. Hence, Zall Foundation proposed the construction of COVID-19 Emergency Hospitals to effectively respond to the surging number of COVID-19 cases. This involved the conversion of existing hospitals that have insufficient, or do not have admission capacities for infectious diseases patients, into emergency hospitals that solely focus on receiving suspected and confirmed COVID-19 cases. From January 30, 2020, Zall Foundation, along with professional medical institutions, reconstructed seven existing professional medical institutions into COVID-19 Emergency Hospitals in less than 10 days. In total, 4,583 wards were provided after renovation, where 2,833 confirmed and suspected COVID-19 patients were cured. The COVID-19 Emergency Hospitals have played an important role in China's epidemic prevention and control by efficiently easing the problems of insufficient ward beds and inadequate admission capacities of infectious diseases hospitals. Based on the experience of construction and operation of the emergency hospitals which are designed in strict adherence to relevant medical standards and regulations, this manual has been compiled by the Zall Foundation. It aims to provide useful reference to the reconstruction of existing hospitals and practice of expanding medical resources for all other regions around the world, to effectively contribute to pandemic control. The manual has been translated into more than 20 languages.
