American Physical
Education Review

In the United States
there are several
thousand devices
containing high-
activity radiation
sources licensed for
use in areas
ranging from
medical uses such
as cancer therapy
to safety uses such
as testing of
structures and

industrial
equipment. Those
radiation sources
are licensed by the
U.S. Nuclear
Regulatory
Commission and
state agencies.
Concerns have been
raised about the
safety and security
of the radiation
sources,
particularly amid
fears that they
could be used to
create dirty bombs,
or radiological
dispersal device
(RDD). In response
to a request from
Congress, the U.S.
Nuclear Regulatory
Commission asked
the National
Research Council to
conduct a study to
review the uses of
high-risk radiation
sources and the
feasibility of
replacing them with
lower risk
alternatives. The

study concludes that the U.S. government should consider factors such as potential economic consequences of misuse of the radiation sources into its assessments of risk. Although the committee found that replacements of most sources are possible, it is not economically feasible in some cases. The committee recommends that the U.S. government take steps to in the near term to replace radioactive cesium chloride radiation sources, a potential "dirty bomb" ingredient used in some medical and research equipment, with lower-risk

alternatives. The committee further recommends that longer term efforts be undertaken to replace other sources. The book presents a number of options for making those replacements. Number of Exhibits: 6 Resource added for the Automotive Technology program 106023. There's no place like home! And that's why we're back. Dare to Repair, Replace & Renovate is the sequel to Dare to Repair, the national bestselling home repair book for women. In our first book, we taught you how to fix a leaky faucet. In this book, we teach you how to replace it. In our first book, we showed you how to

change the direction of ceiling fan blades. In this book, we show you how to install a new fan. We've gone from basic repairs to easy projects that can make your home more comfortable, more beautiful, and more valuable. We will show you how to: Put up a tile backsplash Install a closet system Install a deadbolt lock Replace a medicine cabinet Mount blinds, shades, and shutters Install landscape lighting And we provide easy, step-by-step instructions so you can get rid of the things in your home that are making you crazy: Ugly chandelier? Gone. Outdated vanity? Out of there.

Broken garbage disposal? History. Torn wallpaper? Buh-bye. Incorporating detailed illustrations with witty and encouraging instructions, Dare to Repair, Replace & Renovate will allow you to turn your project wish list into a can-do list. Save time and hundreds of dollars by learning how to repair and overhaul your car's brakes. There are many automotive tasks that are best left to qualified and certified professionals when considering repairing your automobile. There are also many tasks that can be tackled by the weekend do-it-yourselfer with a decent level of

instruction. While just about any system repair or overhaul on more modern cars has gotten more complex over time, brake diagnosis and repair is still well within reach for the home mechanic with a reasonable set of hand tools. In Brake Repair: How to Diagnose, Fix, or Replace Your Car's Brakes: Step-By-Step, ASE technician and professional instructor Steven Cartwright takes you through the entire process of servicing your car's brakes to like-new condition. Ten informative chapters cover everything you will need to know, including chapters on brake history, an overview of

function, types of brakes, power assist, troubleshooting, electronic controls such as ABS, and finally, a complete chapter showing you how to do an entire brake job in step-by-step color photos. With traditional dealership labor rates hovering around \$125 per hour these days, it is easy for a standard four-wheel disc brake job to cost close to \$1,000 when all is said and done. With the help of this book, you will be able to competently and confidently complete the task in similar fashion for less than half the cost, paying for this book many times over the very first time you use it.

Add this valuable tool to your library today. Are your energy bills through the roof, and is your home still cold in the winter and hot in the summer? That's the reality for many homeowners in Wisconsin today, but it doesn't have to be that way. Advances in glass technology and window construction in recent years have made old style windows obsolete. In fact, some windows now on the market are more energy efficient than the walls that surround them. Taking into consideration the window technology available today, we are able to produce high-performance windows that keep

comfort at a maximum and energy consumption at a minimum. Read this book if you are considering replacing some or all of the windows in your home. Learn how to assess the performance metrics on window labels and choose the best product for your situation. Find out about single-, double-, and triple-glazing and how it affects conduction and air infiltration. Read about argon and krypton, and learn which more effectively slows conduction. From the hazards of "doing it yourself," to the pitfalls of hiring a handyman, Wisconsinite Scott "The Window Guy" Young draws from a lifetime of

experience replacing windows the right way. He guides you through the basics of glass production, window styles and construction, installation, price, and long-term value. Arm yourself with the knowledge you need to make informed decisions about replacing the windows in your home. Then window shop like a pro and enjoy the comfort, convenience, good looks, and energy efficiency that high-quality, properly installed windows will deliver for years to come. This unit describes the performance outcomes required to remove and replace the front and rear brake assemblies of a vehicle. It requires

the learner to plan and prepare the task; identify types of brake assemblies; inspect components and identify their function; remove and replace the front and rear brake assemblies; and maintain the work area, tools and equipment. Volume contains: need index past index 6 (People v. Edwards) need index past index 6 (People v. Edwards) need index past index 6 (People v. Edwards) need index past index 6 (People v. Gersh) need index past index 6 (People v. Gersh) need index past index 6 (People v. Gersh) Includes abstracts of magazine articles and "Book reviews". In response to a

congressional request, GAO reviewed the status of the Air Force's efforts to replace its primary close air support aircraft, the A-10 aircraft. GAO found that: (1) the Air Force derived its aircraft requirements from Army air support requirements, which specify needs for both air support against targets near friendly forces and attacks on enemy follow-on forces before they can replace troops at the front; (2) although the Air Force wanted to begin replacing its A-10 aircraft in 1993, the date slipped to 1996 due to technology development delays and budget constraints; (3) although the Air

Force recommended replacing the A-10 aircraft with the A-16 aircraft, it was considering alternative aircraft; (4) estimated costs for replacements vary from \$110 million for the A-16 alternative to \$2.5 billion for new aircraft, while production costs vary from \$7 million to \$12 million for existing aircraft and from \$8 million to \$30 million for new aircraft; (5) the Air Force would not know the total cost of the replacements until it made key decisions on the aircraft and its schedule; (6) the decisions on the A-10 replacement would affect the Air Force's tactical force structure, since a replacement

aircraft would require maintaining existing A-10 aircraft in the force until the late 1990s and would delay the planned conversion of 120 A-10 aircraft to a forward air control role; and (7) the Air Force could also decide to replace the A-10 aircraft with the A-16 aircraft instead of maintaining them during conversion.
