**Language Documentation** Dec 07 2021 "Language documentation," also often called "documentary linguistics," is a relatively new subfield in linguistics which has emerged in part as a response to the pressing need for collecting, describing, and archiving material on the increasing number of endangered languages. The present book details the most recent developments in this rapidly developing field with papers written by linguists primarily based in academic institutions in North America, although many conduct their fieldwork elsewhere. The articles in this volume position papers and case studies focus on some of the most critical issues in the field. These include (1) the nature of contributions to linguistic theory and method provided by documentary linguistics, including the content appropriate for documentation; (2) the impact and demands of technology in documentation; (3) matters of practice in collaborations among linguists and communities, and in the necessary training of students and community members to conduct documentation activities; and (4) the ethical issues involved in documentary linguistics."

*The Tape-recorded Interview* Nov 13 2019 Since 1980, The Tape-Recorded Interview has been an essential resource for folklorists and oral historians--indeed, for anyone who uses a tape recorder in field research. Now, Sandy Ives has updated this manual to reflect the current preferences in tape-recording technology and equipment. When this book was first published, the reel-to-reel recorder was the favored format for fieldwork. Because the cassette recorder has almost completely replaced it, Ives has revised the first chapter, "How a Tape Recorder Works," accordingly and has included a useful discussion of the differences between analog and digital recording. He has also added a brief section on video, updated the bibliography,

and reworked his original comments on tape cataloging and transcription. As in the first edition, Ives's emphasis is on documenting the lives of common men and women. He offers a careful, step-by-step tour through the collection process--finding informants, making advance preparations, conducting the actual interview, obtaining a release--and then describes the procedures for processing the taped interview and archiving such materials for future use. He also gives special treatment to such topics as recording music, handling group interviews, and using photographs or other visual material during interviews.
