This text is a reference to the transmittal of technical data through architectural and interior-design drawings. Topics covered include new construction and remodeling, building-systems drawings, and siting and landscaping issues. Provides a complete program for integrating hypermedia production skills into the classroom, for teachers of lower grades through high school. Section I describes activities adaptable to various teaching styles and curriculum needs, covering everything from rain forests to fractions to pioneers. Activities include step-by-step instructions and reproducible handouts. Section II gives student directions for using many of the hypermedia programs and software support materials currently being used in schools, such as HyperStudio for Apple IIGS, HyperCard, and Multimedia Scrapbook. Appendices offer assessment tools, generic planning sheets, and teacher support materials. A list of minimum requirements is proposed in the report. The list of minimum requirements together with two practical ES examples was used as a basis for a survey sent to small and medium-sized enterprises (SMEs) and others. Responses from 70 companies were received, approximately half of which were identified as SMEs. The survey responses show that ESs vary to a great extent, and that harmonisation/standardisation of ESs is desired. The responses also show that there is a significant need for increased understanding and knowledge on ESs, particularly among SMEs. Recommendations are made on harmonisation of legal requirements for ES content, with some concrete recommendations for compilers of ESs, downstream users, industry/industry organisations and national enforcement authorities. Volume 2 of this series concentrates on the use of synchrotron radiation which covers that region of the electromagnetic spectrum which extends from about 10eV to 3keV in photon energy and is essentially the region where the radiation is strongly absorbed by atmospheric gases. It therefore has to make extensive use of a high vacuum to transport the radiation to the workstation where the presence of hard X-rays can cause extensive damage to both the optics and the targets used in the experimental rigs. The topics chosen for this volume have been limited to the disciplines of physics and chemistry. The FAO minimum requirements in this publication are based on existing international, European and national standards and other published references. The guidelines provide a practical aid to assist purchasing and other agencies to avoid buying or approving sprayers with quality and design limitations, which could compromise operator and environmental safety. Member countries should adopt them immediately, to begin to eliminate substandard and unsafe sprayers from national markets and ultimately from the international scene. Provides both rich theory and powerful applications Figures are accompanied by code required to produce them Full color figures This report describes a study undertaken to identify tasks required of Army aviators performing terrain flight, and to determine the ways in which a computer-generated topographic display might aid in the conduct of these tasks. The report provides: (a) an inventory of the full range of preflight and inflight tasks performed by the Army aviator that require the use of map products, overlays, and geographic data; (b) a review of the recent developments and state-of-the-art in computer graphics technology that are applicable to the production of map products and related displays; and (c) descriptions of computer-graphic capabilities that have potential value for the conduct of flight planning, the conduct of navigation, and the accomplishment of related tasks.
