In Hawai'i these herbs are used in everyday cooking as well as in the elaborate cuisine created by some of the Island's most innovative chefs. Yet even in Hawai'i, people find it difficult to identify these common herbs in the market or garden. Ethnic Culinary Herbs is a fully illustrated guidebook that describes more than thirty herbs grown, sold, and used in Hawai'i. (Many can also be found in ethnic produce markets throughout North America.) Unlike most herb books, which cover the same limited range of species (largely those of European and Mediterranean origin), this volume brings together information about herbs from other

parts of the world and not only identifies the plants but also explains their use and cultivation. Each species is identified by its scientific name, and common names are listed for several languages spoken in Hawai'i. (For example, the Chinese or garlic chive is also identified by its Chinese, Japanese, Filipino, Thai, and Vietnamese names.) A brief, nontechnical description of each herb is accompanied by a full-page line drawing and one or more color photographs. Entries on culinary use are followed by specific instructions for the herb's cultivation and best methods of propagation. Pests and diseases are discussed as well as their control and treatment. An index of common and scientific names permits access to main entries using any name available to the reader. For those interested in observing growing plants, an appendix provides the location of all Honolulu Community Garden sites, where many of the herbs can be found. Herb fanciers, chefs, gardeners, and botanists will be delighted with this thoroughly reliable and useful guide. If you'd like to grow your own food but don't think you have the space, look up! A handbook for growing a victory garden when the enemy is global warming Written by regenerative farmer Acadia Tucker, Growing Good Food calls on us to take up regenerative gardening, also known as carbon farming, for the good of the planet. By building carbon-rich soil, even in a backyard-sized patch, we can capture greenhouse gases and mitigate climate change, all while growing nutritious food. To help us get started, and quickly, Tucker draft plans for gardeners who have no space, a little space, or a lot of space. She offers advice on how to prep soil, plant food, and raise the most popular fruits and vegetables using regenerative methods. She shares the gardening tools you need to get started, the top reasons gardens fail and how to fix them, and how to make carbon farming count when the only dirt you have is in pots. The book includes calls to action and insights from leaders in the regenerative movement, including David Montgomery, Gabe Brown, and Tim LaSalle. Aimed at beginners, the book is designed to inspire an uprising of citizen gardeners. Growing Good Food suggests what could happen if more of us saw gardening as a civic duty. By the end of it, you'll know how to grow some really good food and build a healthier world, too. Growing Good Food: A citizen's guide to backyard carbon farming is part of Stone Pier's "Growing Good Food" series. It joins Growing Perennial Foods: A field guide to

This book contains proven steps and strategies on how to cultivate some of the best tomato's you have ever seen. Tomato cultivation has been long overlooked by many people who decide to venture into lucrative agriculture as beginners. This somewhat ignored vegetable fruit has remained a needed ingredient for the preparation of varieties of meals in USA, UK and across the globe. This means that an average person cannot consciously go a day without eating a yummy meal prepared with tomatoes. Despite its ignored state by new farmers, tomato is currently grown by over 200,000 farmers in USA whom collectively grow over 2.5 million metric tons of tomatoes each year. Its potential is even higher in African continents like Nigeria; a country with a population of 170 million, predicted to exceed 400 million by the year 2050. You can begin farming tomatoes for profit today. The tomato

is a warm season crop that requires cool and warm climate to grow well. It can be consumed raw, and cooked as a fruit or vegetable. Tomatoes are the most popular vegetable to grow in the home garden. It can be great fun growing your own tomatoes, and you can get an even deeper satisfaction by growing your own from seeds. Growing tomatoes from seeds is very easy to do, and also extremely cost effective especially if you use your own that you've cultivated from the previous year. With a little forward planning and by putting into practice some of these beginners tips, you will make a big success of your new tomato plants. From North to south, and coast to coast, tomatoes are consistently the most popular vegetable in American gardens. But for most gardeners, just any old tomato won't do. Some like them red, some like them yellow, orange or even purple. Some prefer tomatoes as tiny as a dime, and some want them as big as a melon. Some like them juicy, some like them dense and pulpy. Fortunately, there are more than 700 different tomato varieties in cultivation today. Plenty of choices for everyone. If you're trying to decide which tomato varieties to grow, here's what you should think about: Disease resistance Growth habit Time to maturity Flavor and texture Disease resistance is important, because tomatoes are vulnerable to a number of diseases that can weaken the plant and reduce yields. Look at the seed packet or plant label to see if the variety has resistance to verticillium and fusarium wilt, two very

common soil-borne diseases that affect tomatoes. Resistance to these diseases is designated by a V or F after the variety name. If tomatoes in your region suffer from root-knot nematode (N), Tobacco Mosaic virus (T) or Alternaria (A), look for resistance to these diseases as well. Late blight is a problem in many areas, so choose a variety that's resistant.

When to Start Tomato Seeds The best time to start tomato plants from seeds is about six to eight weeks before you plan on planting them out into your garden. For areas that get frost, plan on planting out your tomato seedlings two to three weeks after your last frost, so you will start growing tomatoes from seed at four to six weeks before your last frost date.
