Bouaphakeo*, 136 S. Ct. 1036 (2016). Executive Order 13706, signed on Labor Day 2015, takes effect in 2017. It requires federal contractors to allow employees to accrue at least one hour of paid sick leave for every 30 hours they work, and unused sick leave can be carried over from year to year. Mid-2016 DOL regulations make millions more white-collar employees eligible for overtime pay, by greatly increasing the salary threshold for the white-collar exemption. Updates on the PATH Act (Protecting Americans From Tax Hikes; Pub. L. No. 114-113. The DOL published the "fiduciary rule" in final form in April 2016, with full compliance scheduled for January 1, 2018. The rule makes it clear that brokers who are paid to offer guidance on retirement accounts and Individual Retirement Arrangements (IRAs) are fiduciaries. In early 2016, the Equal Employment Opportunity Commission (EEOC) announced it would allow charging parties to request copies of the employer's position statement in response to the charge. The Supreme Court ruled that, in constructive discharge timing requirements run from the date the employee gives notice of his or her resignation--not the effective date of the resignation. Certiorari was granted to determine if the Federal Arbitration Act (FAA) preempts consideration of severing provisions for unconscionability. Partnerships are now pervasive in global education and development, but are they creating equitable, cooperative, and positive relationships? Through case studies of prominent multistakeholder partnerships—including the Education Cannot Wait Fund and Global Partnership for Education—as well as a comprehensive analysis of the global education network, this book exposes clear power imbalances that persist in the international aid environment. The author reveals how actors and organizations from high-income countries continue to wield disproportionate influence, while the private sector holds a growing degree of authority in public policy circles. In light of such evidence, this book questions if partnerships truly ameliorate power asymmetries, or if they instead reproduce the precise inequities they are meant to eliminate. “The use of partnerships for international aid and development has become ubiquitous, and their value has been too-little questioned. For education, Francine Menashy’s book remedies this with a detailed, probing analysis of such partnerships in theory and practice.” —From the Foreword by Steven J. Klees, University of Maryland “International Aid to Education is an urgent read for anyone working in international development. Menashy’s work points to ways in which all of us working in research, policy, and practice can rethink our own roles in perpetuating power imbalances and inequities.” —Sarah Dryden-Peterson, Harvard Graduate School of Education “Francine Menashy’s new book provides a fresh and innovative take on power and politics within multistakeholder partnerships in international development. It makes a strong new contribution to the study of global governance and education policy.” —Karen Mundy, chief technical officer, Global Partnership for Education Untangle New Requirements and Strengthen Your 340B Drug Program The 340B Program Handbook: Integrating 340B into the Health-System Pharmacy Supply Chain The 340B Drug Program Handbook is the comprehensive guide for pharmacy leaders, hospital administrators, legal counsel, and pharmacy managers. An informed modern plan for post-2020 American foreign policy that avoids the opposing dangers of retrenchment and overextension Russia and China are both believed to have "grand strategies"—detailed sets of national security goals backed by means, and plans, to pursue them. In the United States, policy makers have tried to articulate similar concepts but have failed to reach a widespread consensus since the Cold War ended. While the United States has been the world's prominent superpower for over a generation, much American thinking has oscillated between the extremes of isolationist agendas versus interventionist and overly assertive ones. Drawing on historical precedents and weighing issues such as Russia's resurgence, China's great rise, North Korea's nuclear machinations, and Middle East turmoil, Michael O'Hanlon presents a well-researched, ethically sound, and politically viable vision for American national security policy. He also proposes complementing the Pentagon's set of "4+1" pre-existing threats with a new "4+1": biological, nuclear, digital, climatic, and internal dangers. Complete Guide to Human Resources and the Law, 2022 Edition These proceedings represent the work of researchers participating in the 13th International Conference on Cyber Warfare and Security (ICWS 2018) which is being hosted this year by the National Defense University in Washington DC, USA on 8-9 March 2018. horse colors and patterns explained with just enough genetic science and plenty of photographs to illustrate each color or color pattern Conquer today's Windows 10—from the inside out! Is economic inequality the price we pay for innovation? The amazing technological advances of the last two decades—in such areas as artificial intelligence, genetics, and materials—have benefited society collectively and rewarded innovators handsomely: we get cool smartphones and technology moguls become billionaires. This contributes to a growing wealth gap; in the United States; the wealth controlled by the top 0.1 percent of households equals that of the bottom ninety percent. Is this the inevitable cost of an innovation-driven economy? Economist Joshua Gans and policy maker Andrew Leigh make the case that pursuing innovation does not mean giving up on equality—precisely the opposite. In this book, they outline ways that society can become both more entrepreneurial and more egalitarian. All innovation entails uncertainty; there's no way to predict which new technologies will catch on. Therefore, Gans and Leigh argue, rather than betting on the future of particular professions, we should consider policies that embrace uncertainty and protect people from unfavorable outcomes. To this end, they suggest policies that promote both innovation and equality. If we encourage innovation in the right way, our future can look more like the cheerful techno-utopia of Star Trek than the dark techno-dystopia of The Terminator. Learn the latest accounting and auditing developments affecting not-for-profits so that accountants, auditors, and financial managers can prepare financial statements with confidence. This work covers new FASB requirements and information on the latest OMB and Yellow Book developments. It features major program determination and case studies related to revenue recognition and auditing documentation and covers hot topics including: NFP financial statements Risk assessment Documentation Leases Yellow Book Major program determination Key changes GASB updates including GASB Statement No. 91, Conduit Debt Obligations AICPA activities including changes to the auditor's report FASB updates including revenue recognition, grants and contracts, updating the definition of collections, and implementation issue surrounding the financial reporting standard Federal government activities including updates to the Compliance Supplement and proposed changes to the Uniform Guidance Rising concern over the increasing threat of nuclear war impelled the 2017 United Nations (UN) negotiations and adoption by 122 UN member states of a Treaty on the Prohibition of Nuclear Weapons. The Treaty seeks to ban nuclear weapons globally in the same way chemical and biological weapons have already been prohibited. This book provides the first in-depth comprehensive analysis of the implications and possibilities of the new treaty, drawing on the insights of international relations, international laws, and disarmament experts and specialists from Europe, America, the Asia-Pacific, and the UN. In a context where existing nuclear weapon states have so far declined to be party to the new treaty, the book examines not only its emergence and significance but also the prospects and possibilities for its implementation, the challenges associated with verifying the new agreement, the role of both civil society and governments, and the treaty's wider implications in addressing regional and global nuclear threats. This book was originally published as a special issue of *Global Change, Peace & Security* but additionally includes the special section articles on the treaty in the *Journal for Peace and Nuclear Disarmament*. Yoga and mindfulness activities, with roots in Asian traditions such as Hinduism or Buddhism, have been brought into growing numbers of public schools since the 1970s. While they are commonly assumed to be secular educational tools, Candy Gunther Brown asks whether religion is truly left out of the equation in the context of public-school curricula. An expert witness in four legal challenges, Brown scrutinized unpublished trial records, informant interviews, and legal precedents, as well as insider documents, some revealing promoters of "Vedic victory" or "stealth Buddhism" for public-school children. The legal challenges are fruitful cases for Brown's analysis of the concepts of religious and secular. While notions of what makes something religious or secular are crucial to those who study religion, they have special significance in the realm of public and legal norms. They affect how people experience their lives, raise their children, and navigate educational systems. The question of religion in public education, Brown shows, is no longer a matter of jurisprudence focused largely on the establishment of a Protestant Bible or nonsectarian prayer. Instead, it now reflects an increasingly diverse American religious landscape. Reconceptualizing secularization as transparency and religious voluntarism, Brown argues for an opt-in model for public-school programs. *Private Regulation of Labor Standards in Global Supply Chains* examines the effectiveness of corporate social responsibility on improving labor standards in global supply chains. Sarosh Kuruvilla charts the development and effectiveness of corporate codes of conduct to ameliorate "sweatshop" conditions in global supply chains. This form of private voluntary regulation, spearheaded by Nike and Reebok, became necessary given the inability of third world countries to enforce their own laws and the absence of a global regulatory system for labor standards. Although private regulation programs have been adopted by other companies in many different industries, we know relatively little regarding the effectiveness of these programs because companies don't disclose information about their efforts and outcomes in regulating labor conditions in their supply chains. *Private Regulation of Labor Standards in Global Supply Chains* presents data from companies, multi-stakeholder institutions, and auditing firms in a comprehensive, investigative dive into the world of private voluntary regulation of labor conditions. The picture he paints is wholistic and raw, but it considers several ways in which this private voluntary system can be improved to improve the lives of workers in global supply chains. Whether you are a financial statement preparer or auditor, it is critical to understand the complexities of the specialized accounting and regulatory requirements for investment companies. A compelling argument that the Internet of things threatens human rights and security and that suggests policy prescriptions to protect our future The Internet has leapt from human-facing display screens into the material objects all around us. In this so-called Internet of Things—connecting everything from cars to cardiac monitors to home appliances—there is no longer a meaningful distinction between physical and virtual worlds. Everything is connected. The social and economic benefits are tremendous, but there is a downside: an outage in cyberspace can result not only in a loss of communication but also potentially a loss of life. Control of this infrastructure has become a proxy for political power, since countries can easily reach across borders to disrupt real-world systems. Laura DeNardis argues that this diffusion of the Internet into the physical world radically escalates governance concerns around privacy, discrimination, human safety, democracy, and national security, and she offers new cyber-policy solutions. In her discussion, she makes visible the sinews of power already embedded in our technology and explores how hidden technical governance arrangements will become the constitution of our future. This book undertakes unique case studies, including interviews with participants, as well as empirical analysis, of public and private enforcement

of Australian securities laws addressing continuous disclosure. Enforcement of laws is crucial to effective regulation. Historically, enforcement was the province of a government regulator with significant discretion (public enforcement). However, more and more citizens are being expected to take action themselves (private enforcement). Consistent with regulatory pluralism, public and private enforcement exist in parallel, with the capacity to both help and hinder each other, and the achievement of the goals of enforcement in a range of areas of regulation. The rise of the shareholder class action in Australia, backed by litigation funding or lawyers, has given rise to enforcement overlapping with that of the government regulator, the Australian Securities and Investments Commission. The ramifications of overlapping enforcement are explained based on detailed analysis. The analysis is further bolstered by the regulator's approach to enforcement changing from a compliance orientation to a "Why not litigate?" approach. The analysis and ramifications of the Australian case studies involve matters of regulatory theory and practice that apply across jurisdictions. The book will appeal to practitioners, regulators and academics interested in regulatory policy and enforcement, and the operation of regulators and class actions, including their interaction.
