Materials for the New Millennium Apr 18 2020

Proceedings - Ironmaking Conference May 12 2022

Industrial Diamond Review Sep 23 2020

Supercollider 5 Jul 14 2022 The fifth annual International Symposium on the Super Collider was a great success. Over 700 participants from around the country and the world gathered on May 6-8,1993, in San Francisco to mark the progress of the SSC, to discuss current issues, and to chart a course of action for the continued development of our understanding of basic subatomic matter. Together, the American public, academic communities, private sectors and governments from around the world have embarked on a project critical to maintaining our nation's preeminence as the world's leader in basic scientific research and the practical application of scientific knowledge. America has long maintained a commitment to investing in our nation's future. The Super Collider represents an essential next step in the direction of scope of human knowledge. The theme of the conference reflects these important goals: "SSC Focusing the World on Next Generation Science. " The challenge for us today is to spread the message of the importance of investing in America's future. This is our task, and the task of supporters

of the Super Collider throughout the nation. Without employing all of our energies, our nation will miss an historic opportunity to ensure America's scientific technological and economic leadership in the years ahead as we enter the next millennium.

Stahlbau-Kalender 2011 May 20 2020 Zur Vorbereitung auf die Einführung von Eurocode 3 werden die Grundnorm Teil 1-1 sowie Teil 1-8 über Anschlüsse mit den zugehörigen Nationalen Anhängen dokumentiert. Dabei wird die größte Sorgfalt der Autoren auf die schlüssige Lesbarkeit der verzahnten Normendokumente gelegt. Erläuterungen der Hintergründe zur europäischen Normung im Stahlbau - insbesondere auch zu den Regelungen für die Bemessung und Ausführung der verschiedenen Verbindungsarten - sorgen für Verständnis und ermöglichen eine schnelle Einarbeitung. Verbindungen sind ein Innovationstreiber im Stahlbau - in den sechs Jahren seit der Behandlung dieses Schwerpunktthemas hat sich vieles getan. Der Stahlbau-Kalender 2011 stellt anwendungsbereites Wissen mit zahlreichen Beispielen zur Verfügung.

Evaluation of Grouting Materials for Anchor Embedments in Hardened Concrete Mar 10 2022 Rehabilitation of civil works hydraulic concrete structures such as navigation locks or stilling basins commonly involves the removal of defective concrete and replacement with new concrete. Steel reinforcing anchors are normally embedded into the base concrete to assist in the attachment of the base concrete to the new concrete. With respect to bonding the steel anchors into the base concrete, this investigation was conducted to evaluate the effectiveness of cementitious, vinyl ester and epoxy grouts in bonding embedment of the anchors. Tensile pullout and long-term creep strain tests were accomplished in this study in correlation with parameters for dry and wet environments and for bond maturity ages of 1, 3, 7, and 28 days and 1 year. Tests results indicated all of the grout materials developed sufficient bond strength in pullout and creep tests for dry applications, with the exception of one epoxy material. However, for submerged applications, the epoxy grouts exhibited poor developed bond strength in both pullout and creep tests. As a result, particular caution is recommended for the application of epoxy grouts to embed steel anchors in hardened concrete under submerged conditions.

Stahlbau-Kalender 2019 - Schwerpunkt Jun 20 2020 Zentrale Themen des Stahlbau-Kalender 2019 sind Verbindungen im Stahlbau sowie Digitales Planen und Bauen. Verbindungen sind ein Innovationstreiber im Stahlbau. Die richtige Auswahl und Detailausbildung kann die

Wirtschaftlichkeit von Stahlkonstruktionen erhöhen. Das Buch stellt anwendungsbereites Wissen mit zahlreichen Beispielen zur Verfügung. Auf die Methoden und Vorgehensweisen zur Bemessung und konstruktiven Durchbildung verschiedener Verbindungsarten wird in sechs Beiträgen ausführlich eingegangen. Die Verwendung vorgefertigter Zugstabsysteme bei filigranen Stahl-Glas-Konstruktionen für Fassaden, Dachtragwerke oder Fußgängerbrücken hat in den letzten Jahren zugenommen. Besonders wichtig für die Praxis sind z. B. die neuen Entwicklungen bei vorgespannten geschraubten Verbindungen. Auch Setzbolzen und Metallschrauben weisen eine breite Anwendungspalette im Stahlbau und Metalleichtbau auf. Gussknoten ermöglichen aufgrund der freien Formbarkeit den optimalen Einsatz von Hohlprofilen, auch bei geometrisch komplizierten Tragstrukturen. Mit tragenden Klebverbindungen werden neuartige Konstruktionen und Mischbauweisen im konstruktiven Ingenieurbau hervorgebracht. Damit einher geht das Erfordernis des werkstoffgerechten Konstruierens als Voraussetzung für dauerhafte und wirtschaftliche Tragwerke. Was digitales Planen und Bauen konkret für den Stahlbau und die Werkstattfertigung bedeutet, wird in drei praxisbezogenen Beiträgen dargestellt. Der Stahlbau-Kalender dokumentiert und kommentiert verlässlich den aktuellen Stand des deutschen Stahlbau-Regelwerkes. Das Buch ist ein Wegweiser für die richtige Berechnung und Konstruktion im gesamten Stahlbau mit neuen Themen in jeder Ausgabe. Herausragende Autoren aus der Industrie, aus Ingenieurbüros und aus der Forschung vermitteln Grundlagen und geben praktische Hinweise.

Adhesive Anchors in Concrete Under Sustained Loading Conditions Apr 30 2021 Explores a test method designed to help determine an adhesive anchor's ability to resist sustained tensile loads.

Retrofit Railings for Truss Bridges Jan 08 2022 In 2003, there were 38 metal truss bridges 50 years of age or older remaining on the State of Texas highway system. Of these 38 bridges, 33 are listed in the National Register of Historic Places. Many of these bridges do not meet current design criteria for rehabilitation due to narrow deck widths, low vertical clearance, and substandard load capacity. In addition, the existing bridge railing systems on these bridges have not been shown to meet the current requirements for safety and strength. This project addressed the design and performance of acceptable traffic railings for existing and new truss bridges in Texas. Specific objectives were to: * design/develop a retrofit railing for low-speed application on the Roy B. Inks Bridge in Llano, Texas; * design/develop a retrofit railing for high-speed application on the U.S. 281 Bridge over the Brazos River in Palo Pinto County, Texas; * identify criteria that can serve as a basis for design exceptions; and design/develop a traffic railing for new truss bridges.

Evaluation of LS-DYNA Concrete Material Model 159 Sep 04 2021 An elasto-plastic damage model with rate effects was developed for concrete and implemented into LS-DYNA, a commercially available finite element code. This manual documents the theory of the concrete material model, describes the required input format, and includes example problems for use as a learning tool. A default material property

input option is provided for normal strength concrete. The model was developed for roadside safety applications, such as concrete bridge rails and portable barriers impacted by vehicles, but it should also be applicable to other dynamic applications. The companion report to this manual is entitled, Users manual for LS-DYNA concrete material model 159, FHWA-HRT-05-062.
