His candid vignettes from life on the centre stage of Indian technology and societal missions, Indian politics and world affairs are interwoven with revelations of a profound connection with Swamiji. He describes how his path has been illuminated by Swamiji's words and his inspirational, loving presence. Through the life of Pramukh Swamiji and the transnational work of the BAPS Swaminarayan Sanstha, Dr Kalam traces the contemporary concerns of the Indian diaspora across the world and the emerging Indian identity of a capable, right-thinking and hardworking people. Drawing from the lives of great scientists and creative leaders, Transcendence captures the essence of all religions and is as much a fountain of inspiration and a treasury of wisdom as it is a tribute to the multi-faith, pluralistic Indian society. Half the world's population-3 billion people-are below the poverty line, and 70 per cent of the worldÆs poor live in rural areas. Target 3 Billion encapsulates Dr A.P.J. Abdul KalamÆs mission to eradicate poverty from the world. With 750 million people living in villages, India has the largest rural population in the world. Based on his Indian experience, Dr Kalam recommends a sustainable and inclusive development system called PURA-Providing Urban Amenities in Rural Areas-to uplift the rural poor not by subsidies but through entrepreneurship with community participation. To make his case, Dr Kalam cites the examples of individuals and institutions, in India and from across the world, who, with an entrepreneurial spirit and a burning desire to make a difference, have successfully generated and tapped into the potential of the rural masses. Fabio Luiz de Oliveria Rosa changed the face of the rural district of Palmares, Brazil, by acquiring for the farmers access to electricity and water, which effect, combined with better agricultural methods, led to an increase in prosperity and stemmed the migration to cities. The 123-strong Magar clan owned Magarpatta, a 430-acre plot on the outskirts of Pune, Maharashtra. In the 1990s, they organized and set up the Magarpatta city which is now home to over 35,000 residents and a working population of 65,000 and boasts of an IT park. Targets 3 Billion tells the story of the brilliantly envisaged global sustainable development system that is PURA, outlining Dr Kalam's vision for every individual and organization-a vision that can create 3 billion empowered, productive and healthy citizens, and generate 3 billion smiles. Book jacket. In this long-awaited volume, on which he worked for twenty years, Mr. Wolfson describes the body of doctrine known as the Kalam. Kalam, an Arabic term meaning "speech" and hence "discussion," was applied to early attempts in Islam to adduce philosophic proofs for religious beliefs. It later came to designate a system of religious philosophy which reached its highest point in the eleventh century; the masters of Kalam, known as Mutakallimun, were in many respects the Muslim equivalent of the Christian Church Fathers. Mr. Wolfson studies the Kalam systematically, unfolding its philosophic origins and implications and observing its repercussions in other religions. He scrutinizes the texts of Muslim writers for their treatment of such crucial problems as the attributes of God, the Creation, causality, predestination and free will. In the process he shows how the teachings of the Koran were constantly interwoven with ideas from Greek and Oriental philosophies, Judaism, and Christianity as Islamic thought developed. As lucidly written and intellectually stimulating as all the author's earlier books, this volume is a fitting capstone to a notable career. Harry Wolfson spent sixty-six years at Harvard University, as undergraduate, graduate student, teacher, and professor emeritus. From 1925 until his retirement in 1958 he was Nathan Littauer Professor of Hebrew Literature and Philosophy at Harvard. He died in September 1974 at the age of 86. The Philosophy of the Kalam is the last major work of one of the great scholars of our age. Harry Wolfson was renowned throughout the world for the depth, scope, and wisdom of his monumental volumes on the structure and growth of philosophic systems from Plato to Spinoza. It was not only his extraordinary erudition that commanded respect, his awesome mastery of all the primary sources, Greek, Christian, Judaic, and Muslim; it was also his penetrating insight and his original and groundbreaking interpretations. A.P.J. Abdul Kalam became President of India in July 2002. He was a surprise choice. A scientist and not a politician, with an unusual hairstyle and an unassuming way of doing things, and no other agenda except that of seeing India become a developed and strong nation. How would such a man fit into the regal splendour of Rashtrapati Bhavan, and all the pomp and ceremony of a head of state? What followed, however, as P.M. Nair shows in *The Kalam Effect*, was a remarkable presidency that in the next five years transformed the way people looked at this office, and made Kalam popular in a way few politicians have been. Rashtrapati Bhavan became a much more accessible place, and his 'at

homes' drew guests in the thousands. Not only that, the website he set up became a huge draw, and people wrote to him on e-mail or otherwise from across the country. His positive attitude infected all those who came in touch with him. While the reasons for his popularity will be analysed for a long time, Nair, who was his Secretary, suggests in this affectionate yet factual account some of the probable causes. One of these being that Kalam is just a very special human being. In his monumental *Philosophy of the Kalam* the late Harry Wolfson--truly the most accomplished historian of philosophy in our century--examined the early medieval system of Islamic philosophy. He studies its repercussions in Jewish thought in this companion book--an indispensable work for all students of Jewish and Islamic traditions. Wolfson believed that ideas are contagious, but that for beliefs to catch on from one tradition to another the recipients must be predisposed, susceptible. Thus he is concerned here not so much with the influence of Islamic ideas as with Jewish elaboration, adaptation, qualification, and criticism of them. To this end he examines passages reflecting Kalam views by a wide variety of Jewish thinkers, including Isaac Israeli, Judah Halevi, Abraham ibn Ezra, and Maimonides. As always in Wolfson's work, two aspects are apparent: the special dimensions of Jewish thought as well as its relation to other traditions. And as always his prose is both graceful and precise.

APJ Abdul Kalam, a man who reached unimaginable heights but never forgot his roots. A man who brought his own brand of excellence and humility to everything he touched. Dr. Craig provides a broad assessment of the argument in lieu of recent developments in philosophy, mathematics, science and theology. This is a bird book with a difference. A young New Guinea Highlander, born before Europeans first entered his home area, describes the birds his people know and name. Ian Saem Mjnep is a Kalam, from the Kaironk Valley in the Schrader Range, on the northern fringes of the Central Highlands of Papua New Guinea. In the twenty-five square miles of the mountain forest, garedn land, and grasslands of the Upper Kaironk 140 bird species are known to occur, including many of the birds of paradise for which New Guinea has for so long been famous. Saem describes 137 of these, as well as others from neighboring areas at lower altitudes, an impressive documentation of the extent and accuracy of neolithic natural history. He also describes six kinds of bats, for bats are classified as birds by Kalam. Saem not only describes the appearance and habits of the birds, but relates bird lore to many aspects of the life and thought of his people, to hunting, gardening, ceremonials, mythology, and magic. He reveals the Kalam knowledge of other animals and of plants. He also gives an insight into the momentous transition his people have undergone in the past twenty years, from stone-age isolation and autonomy to integration and participation in the newly independent nation of Papua New Guinea. A book in memory of the country's most loved teacher. Dr Kalam is often remembered as a teacher par excellence, whose words, thoughts and very life were lessons in many ways. Abdul Kalam: Biography Of A Sainly Scientist THE LIFE AND TIMES OF VEER SAVARKAR Pramukh Swamiji Maharaj, one of the most inspiring spiritual figures of modern times and the fifth spiritual successor of Bhagwan Swaminarayan, became a friend of the eleventh president of India, Dr A.P.J. Abdul Kalam. Together they created an unparalleled spirituality-science fellowship. In Roohdaar, Dr Kalam and Arun Tiwari map a journey of self-realization reflected in the eyes of Pramukh Swamiji, painting a delightful fusion of spirituality, science and leadership. Through the life of Pramukh Swamiji and the history of the Swaminarayan mission, Dr Kalam traces the great rise of the Indian diaspora across the world. Drawing from the lives of great scientists and creative leaders, the book captures the spiritual essence of all religions and is a a tribute to the multi-faith Indian society. Dr. Kalam was born and brought up in a multi-religious, multi-ethnic community, and this type of milieu had a profound effect on his personality. He gave equal respect to all faiths and religions; and he did not pay only lip-service to different religions. During his life, he visited the saints and seers of all faiths, discussed with them and learnt from them. He learnt what divinity and spirituality actually meant, and brought out a blended form. For him, religion is a connecting thread. He was quite at ease when he quoted from the Gita or the Hadith, or for that matter, from the holy texts of other faiths. In this book, we have made a solemn endeavour to read his mind, how he thought at every turn of his life; and this will help the readers to understand the intricacies of his thinking and how he was guided for a mission in his life. To understand him well, we have also narrated a number of incidents, accidents and events of his life, that would contribute to holistic understanding about him. He took up the challenges and worked on them wholeheartedly; whenever he failed, he overcame his negativity and came out a stronger man than ever. This is the beauty of his character, and this makes him one of the most popular public figures of all times. May his soul rest in peace! —K. Senthil Kumar, IAS "As India's 11th President, Abdul Kalam captured the hearts of people all over India. He threw open the doors of Rashtrapati Bhavan to the general public. He invited schoolchildren to attend the function to appoint him President of India. He hated being addressed as 'Your Excellency', and told people not to do so. Abdul Kalam was the first scientist to occupy the highest office in the land. He is known for his powerful intellect and his humility. He is an example to us all." The ancient kalam cosmological argument maintains that the series of past events is finite and that therefore the universe began to exist. Two recent scientific discoveries have yielded plausible prima facie physical evidence for the beginning of the universe. The expansion of the universe points to its beginning-to a Big Bang-as one retraces the universe's expansion in time. And the second law of thermodynamics, which implies that the universe's energy is progressively degrading, suggests that the universe began with an initial low entropy condition. The kalam cosmological argument-perhaps the most discussed philosophical argument for God's existence in recent decades-maintains that whatever begins to exist must have a cause. And since the universe began to exist, there must be a transcendent cause of its beginning, a conclusion which is confirmatory of theism. So this medieval argument for the finitude of the past has received fresh wind in its sails from recent scientific discoveries. This collection reviews and assesses the merits of the latest scientific evidences for the universe's beginning. It ends with the kalam argument's conclusion that the universe has a cause-a personal cause with properties of theological significance. Did the universe begin to exist? If so, did it have a cause? Or could it have come into existence uncaused, from nothing? These questions are

taken up by the medieval-though recently-revived-kalam cosmological argument, which has arguably been the most discussed philosophical argument for God's existence in recent decades. The kalam's line of reasoning maintains that the series of past events cannot be infinite but rather is finite. Since the universe could not have come into being uncaused, there must be a transcendent cause of the universe's beginning, a conclusion supportive of theism. This anthology on the philosophical arguments for the finitude of the past asks: Is an infinite series of past events metaphysically possible? Should actual infinities be restricted to theoretical mathematics, or can an actual infinite exist in the concrete world? These essays by kalam proponents and detractors engage in lively debate about the nature of infinity and its conundrums; about frequently-used kalam argument paradoxes of Tristram Shandy, the Grim Reaper, and Hilbert's Hotel; and about the infinity of the future.
